15. Reference Tool.....	29

## 1. Theme

- Favicon

A favicon is a graphic image (icon) associated with a particular Web page and/or Web site. Many recent user agents (such as graphical browsers and newsreaders) display them as a visual reminder of the Web site identity in the address bar or in tabs.

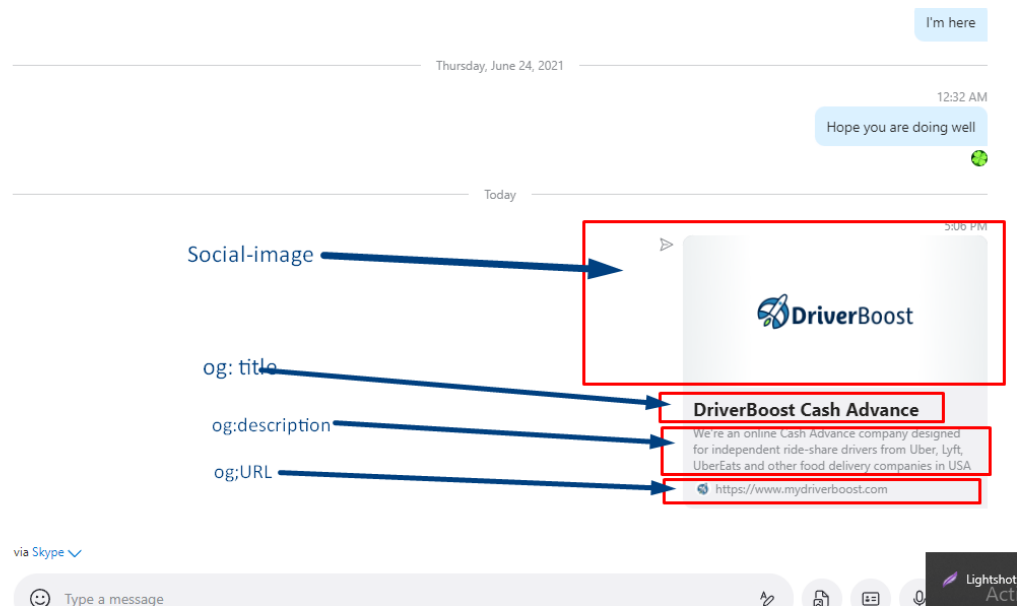

- Favicon Genertor  
<https://realfavicongenerator.net/>

- Font, Main Color (2 or 3 colors)

## 2. SEO

- Social Media Meta tag  
e.g.

```
<meta property="og:image"
content="{ asset('assets/images/DriverBoost_Social_Media_Share.png')}" />
<meta property="og:type" content="website" />
<meta property="og:url" content="https://www.mydriverboost.com.com/" />
<meta property="og:title" content="DriverBoost Cash Advance" />
<meta property="og:description" content="We're an online Cash Advance company designed for
independent ride-share drivers from Uber, Lyft, UberEats and other food delivery companies in
USA" />
```

<https://www.kontentino.com/blog/social-media-meta-tags-a-complete-guide/>

- Meta tag for site SEO

e.g.

```
<title>Buyer Member's FAQ</title>
<meta name="description" content="Merchant Cash Advance investment Frequently Asked Questions - Buyer Members Frequently Asked Questions">
<meta name="author" content="Disruptive MCA">
```

### 3. Marketing, Site Analysis

- Robot.txt
- Sitemap.xml
- Google Tag Manager

e.g.

```
<!-- Global site tag (gtag.js) - Google Analytics -->
<script async src="https://www.googletagmanager.com/gtag/js?id=G-07[REDACTED]5P"></script>
<script>
  window.dataLayer = window.dataLayer || [];
  function gtag(){dataLayer.push(arguments);}
  gtag('js', new Date());

  gtag('config', 'G-07[REDACTED]5P');
</script>
<!-- Global site tag (gtag.js) - Google Ads: 10781440614 -->
<script async src="https://www.googletagmanager.com/gtag/js?id=AW-107[REDACTED]14"></script>
<script>
  window.dataLayer = window.dataLayer || [];
  function gtag(){dataLayer.push(arguments);}
  gtag('js', new Date());

  gtag('config', 'AW-107[REDACTED]14');
</script>
```

- Facebook

e.g.

```

<!-- Facebook Pixel Code -->
<script>
!function(f,b,e,v,n,t,s)
{if(f.fbq)return;n=f.fbq=function(){n.callMethod?
n.callMethod.apply(n,arguments):n.queue.push(arguments)};
if(!f._fbq)f._fbq=n;n.push=n;n.loaded=!0;n.version='2.0';
n.queue=[];t=b.createElement(e);t.async=!0;
t.src=v;s=b.getElementsByTagName(e)[0];
s.parentNode.insertBefore(t,s)}(window, document,'script',
'https://connect.facebook.net/en_US/fbevents.js');
fbq('init', '239[REDACTED]92');
fbq('track', 'PageView');
</script>
<noscript></noscript>
<!-- End Facebook Pixel Code -->

```

- Etc...
- User-friendly error messages
  - Error Display  
For security reasons, the correct error should not be displayed.  
e.g.

**Buyer Member Log In**

Oops! You have entered invalid credentials.

Email address

Password

[Show](#)

[Forgot Password](#)

**Login**

Don't have an aooount yet?

## 4. Site Loading Speed

- Lazy Loading
- Page loading speed tool  
e.g.  
<https://pagespeed.web.dev/>

## 5. Security

- Captcha for Bot Check  
Google recaptcha, Yandex Captcha etc...
- Login Attempt Limit (3 times)
- Validation check for Fields
  - Validation check from frontend
  - Validation check from backend
- CSRF token  
Cross-Site Request Forgery (CSRF) is **an attack that forces authenticated users to submit a request to a Web application against which they are currently authenticated**. CSRF attacks exploit the trust a Web application has in an authenticated user.
- JWT  
JWT, or JSON Web Token, is **an open standard used to share security information between two parties — a client and a server**. Each JWT contains encoded JSON objects, including a set of claims. JWTs are signed using a cryptographic algorithm to ensure that the claims cannot be altered after the token is issued.
- Two-Step-Verification  
Two-step verification is **a process that involves two authentication methods performed one after the other to verify that someone or something requesting access is who or what they are declared to be**.
- Agent  
A user agent is a “string” — that is, a line of text — identifying the browser and operating system to the web server.

You can check environment of user's side.

## 6. Environment

- .htaccess file

.htaccess files (or "distributed configuration files") **provide a way to make configuration changes on a per-directory basis**. A file, containing one or more configuration directives, is placed in a particular document directory, and the directives apply to that directory, and all subdirectories thereof.

- Redirect to HTTPS
  - Redirect to WWW
  - Redirect to Maintenance Page
- e.g.

```
<IfModule mod_rewrite.c>
  RewriteEngine On
  RewriteCond %{HTTPS} off
  # First rewrite to HTTPS:
  # Don't put www. here. If it is already there it will be included, if not
  # the subsequent rule will catch it.
  RewriteRule .* https://%{HTTP_HOST}%{REQUEST_URI} [L,R=301]
  # Now, rewrite any request to the wrong domain to use www.
  # [NC] is a case-insensitive match
  RewriteCond %{HTTP_HOST} !^www\. [NC]
  RewriteRule .* https://www.%{HTTP_HOST}%{REQUEST_URI} [L,R=301]

  #Laravel Redirect to Public folder
  RewriteCond %{REQUEST_URI} !public/
  RewriteRule (.*?) /public/$1 [L]

  #maintain mode
  #RewriteCond %{REQUEST_URI} !index.html
  #RewriteRule .* /maintain/index.html [L]
</IfModule>
```

- .env file  
The live site's **environment** must be in **production** mode.  
No local or testing.  
**Debug** mode must be **false**.

## 7. Performance, Maintenance

- Log  
All activity on the site must be logged, even if not in error.  
e.g.

production	Info	14:09:16	hisfaith@outlook.com: login attempt : 1
production	Info	14:07:49	curtisotto09@gmail.com go to docuSign view.
production	Info	14:07:49	: docuSign view getting was successful.
production	Info	14:07:46	curtisotto09@gmail.com access token for docuSign getting was successful.
production	Error	14:07:26	curtisotto09@gmail.com called empty cart from get deal.
production	Info	14:05:57	curtisotto09@gmail.com: login success!
production	Info	14:05:57	curtisotto09@gmail.com: login attempt : 1
production	Error	13:41:06	dfigroupinvestor@gmail.com: binfo saving error.Class 'App\Http\Controllers\Dashboard\MailService' not found
production	Info	13:35:43	dfigroupinvestor@gmail.com: otp attempt : 1

For laravel:

<https://github.com/ARCANEDDEV/LogViewer>

- Exception Management  
Try Catch  
e.g.

```
try {
    $mservice->send('emails.accept', $details, $receiver);
} catch (\Throwable $e) {
    Log::error($user->email." Application Accepted email sending error: ".$e->getMessage());
}
```

- Maintenance Mode

## 8. Business

- Debit card / Credit Card
  - Debit Card  
A debit card is a payment card that can be used in place of cash to make purchases. It is similar to a credit card, but unlike a credit card, the money for the purchase must be in the cardholder's bank account at the time of a purchase and is immediately transferred directly from that account to the merchant's account to pay for the purchase.
  - Credit Card  
A credit card is a payment card issued to users to enable the cardholder to pay a merchant for goods and services based on the cardholder's accrued debt. The card issuer creates a revolving

account and grants a line of credit to the cardholder, from which the cardholder can borrow money for payment to a merchant or as a cash advance.

- Bank account
  - Account Type (Saving / Checking)  
A **savings** account is an interest-bearing deposit account held at a bank or other financial institution. Though these accounts typically pay a modest interest rate, their safety and reliability make them a great option for parking cash you want available for short-term needs.  
  
A **checking** account is a deposit account held at a financial institution that allows withdrawals and deposits. Also called demand accounts or transactional accounts, checking accounts are very liquid and can be accessed using checks, automated teller machines, and electronic debits, among other methods. A checking account differs from other bank accounts in that it often allows for numerous withdrawals and unlimited deposits, whereas savings accounts sometimes limit both.
  - Routing  
Routing numbers are nine-digit numbers that identify your bank or credit union in a financial transaction.
  - Account Number  
Finally, your bank account number is a unique series of numbers that identifies your account. Typically, account numbers range between eight to twelve digits.

## 9. Customer Management

- You need to make Business Name (User Name).  
This is different Full Name(firstname, lastname);  
You have to contact with client by Business Name.  
e.g. lightmoon, Topdev, TrustFreelancer, etc...
- you need to keep moral in the chatting.
- You must keep the promised time with Customer.
- You must continue to work during business hours.
- You need to demonstrate overtime to the customer.
- Greetings are important.  
“Have a good dream” than “See you tomorrow”  
“How was your weekend?” than “How are you?”
- Holiday management is important.  
Message, Card
- Chatting
  - Good  
Let me think, Let me try, I think ...
  - Bad

I can do... , I will...

- Use emoticons carefully in chat.
- You need to set up multiple contact methods with your client.  
e.g. email, skype, telegram
- You need to suggest good idea for project.  
For it, you have to understand about client business.
- Monday and Sunday is important.
- A day is 8 hours for a customer but 24 hours for you.
- You must inform your customers in advance of any sudden events (like network offline or power off).
- Please keep comment style in the code.

```
/**
 * Abstract API Class
 * @author Cl [redacted] ev cl [redacted] @gmail.com
 *
 * created at 2022-06-05 10:49:30
 * updated at 2022-06-05 10:49:34
 */
namespace App\library;

use Illuminate\Support\Facades\Log;

class Abstractapi {
```

If you are working with agency, you can get client by this comment.

## 10. Chatting

- Introduce
  - Greeting
  - Skill
  - Experience with past jobs  
A description of the skills the client wants is important.  
You can suggest good idea or API for project.
  - Work time and Hourly Rate  
e.g.  
Hourly rate \$30/hr, 40hr/week (Monday - Friday)  
I prefer long term work over short term.  
We can discuss hourly rates for long term relationship.  
If your work is urgent, I can work even on weekends.  
(or you can suggest free work to client for weekend.)

- Greeting

Even if you got a bad impression on your clients, you need to leave a good impression on them.  
e.g.

If you need my help, you can contact me at any time.

## 11. Work TimeZone

- US

Business time (contact time): 23 - 7 o'clock

Rest Time : 8 – 12 o'clock, 20 – 23 o'clock

Working Time: 14 – 19 o'clock

- Europe

Business time (contact time): 17 - 2 o'clock

Rest Time : 3 – 7 o'clock, 14 – 16 o'clock

Working Time: 8 – 12 o'clock

- All

2 hours rest after meals.

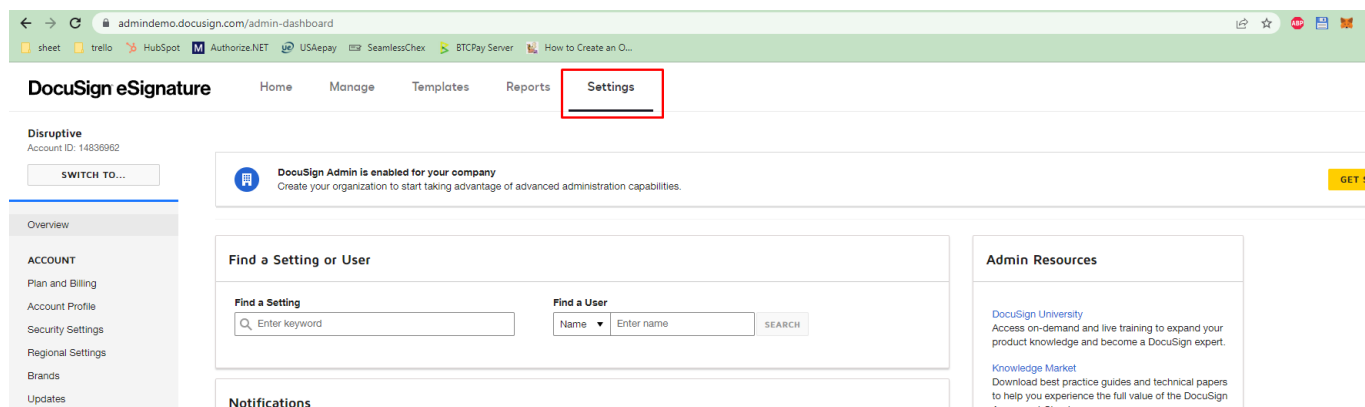

## 12. Third Party API

- SMS

- Sakari (<https://sakari.io/>)
- Clicksend (<https://www.clicksend.com/us/>)

- Signature (<https://www.docusign.com/>)

<https://github.com/docusign/docusign-esign-php-client>  
Developers must create a developer account.

HubSpot API key

Use your HubSpot API key to access the same APIs that power all HubSpot tools. This key gives developers full access to make changes to this account through HubSpot's API, including reading logged emails from connected email accounts and other third party data. Keep it safe and don't share it publicly. For more information, see our [Privacy Policy](#).

Each key is specific to a HubSpot account, not an individual user, and only one key is allowed at a time. You can deactivate your API key and generate a new one at any time.

[Learn more about the HubSpot API key](#)

**Try out private apps?**  
Private apps are integrations that use access token instead of API keys for authentication. We handle the configuration, which means you get the security of OAuth without all the work. [Take me to private apps](#) [Learn more](#)

### API Keys

+ Generate Key

The [BTCPay Server Greenfield API](#) offers programmatic access to your instance. You can manage your BTCPay Server (e.g. stores, invoices, users) as well as automate workflows and integrations (see [use case examples](#)). For that you need the API keys, which can be generated here. Find more information in the [API authentication docs](#).
